

AMBULATORY BLOOD PRESSURE MONITORING

Our Project Teams take responsibility for every aspect of the ABP component of a study protocol and offer

- > Site- and patient-friendly data acquisition procedures
- > Immediate on-site report
- > Easy data transfers
- > Validation of recording compliance
- > Periodic and ad hoc database transfers
- > Flexible reporting

EQUIPMENT RENTAL

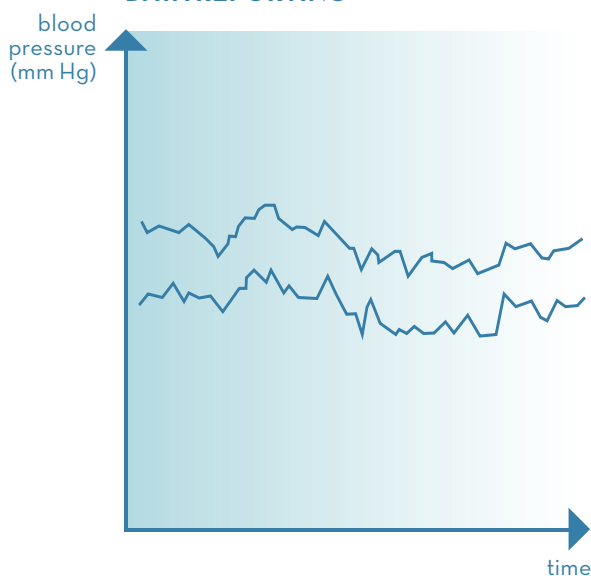

> Provision of Spacelabs Ambulatory Blood Pressure Monitoring devices that allow the recording of 24-hour blood pressure data at defined intervals. Different cuff sizes are available for paediatric and obese patients.

> Services include:

- Programming of day- and night-time measurement intervals as scheduled in the protocol
- 24/7 Hotline
- Express shipping of spare parts and consumables
- Back-up equipment

DATA REPORTING

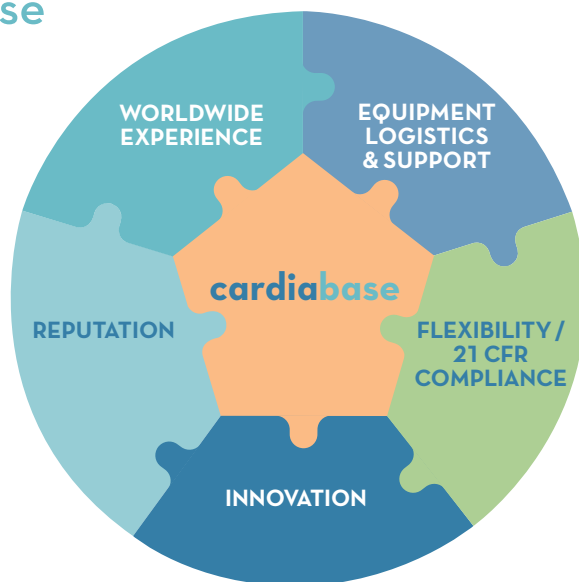

QUALITY REPORTING

Patient number	
Visit name	
Hook up date & time e.g (12/APR/2007 - 14:25)/...../.....:.....

QUALITY ASSESSMENT	RESULTS		COMMENTS
	YES	NO	
> Expected Protocolar Set-up of BP measurement (1 measure every 15 min.)			
> Total recording duration > 22 h. (between first and last validated BP measure)			
> Validated BP measures > 75%			
> Missing averaged hourly BP values < 3			
> Absence of consecutive missing hourly BP values			
> CABPM recording accepted for the visit
